

Product Overview

Nationwide Freestanding Steel Hoarding is our most popular reusable free stand hoarding system. This system can be installed quickly, providing good site privacy and security.

Hoarding panels are manufactured using pre-galvanised steel & come in the form as standard. The fencing panels can then be powder coated in various colours and we can match up the hoarding panel colour to match your corporate colours if required. Where aesthetics is important, we strongly recommend that a powder coating finish.

Features

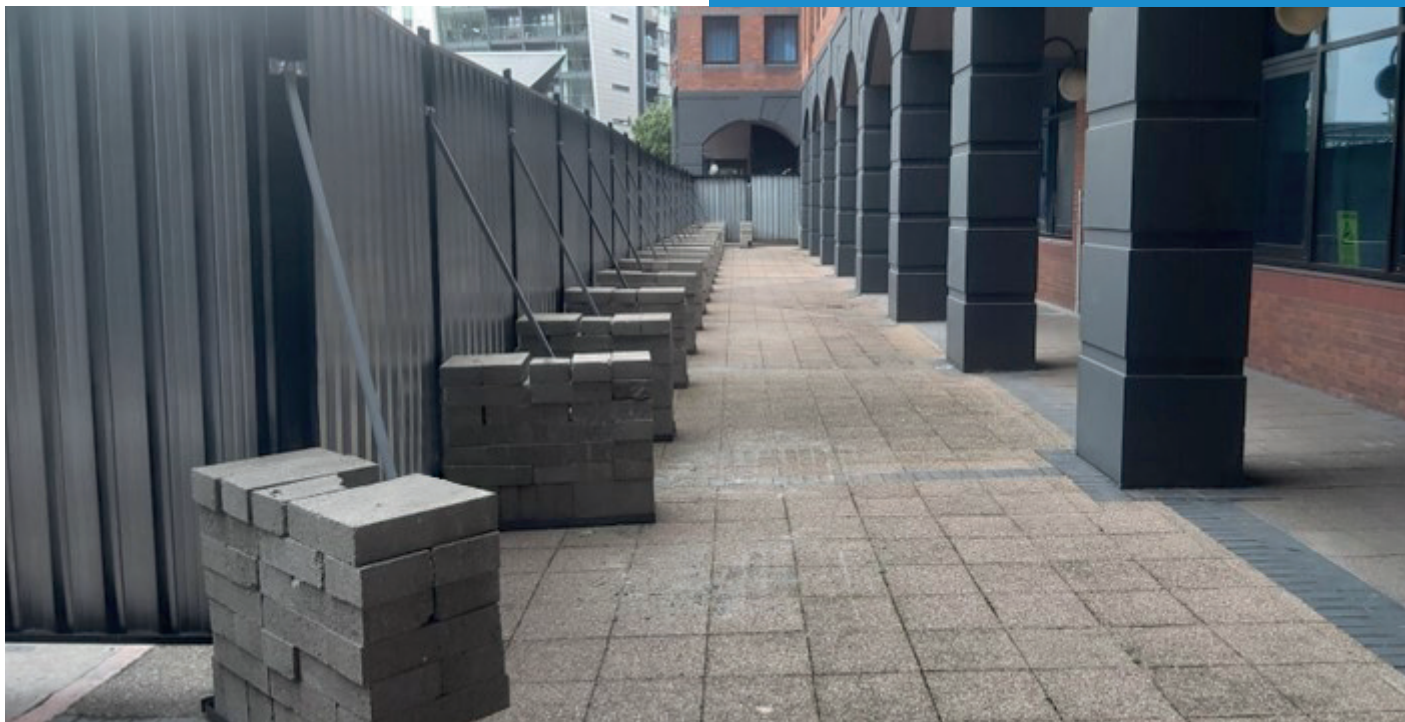

- **Solid Construction**
Protect buildings, plant, machinery, and people from vehicles.
