

Product Overview

Produced in UV stabilised polyethylene the GB2™ Barrier is suitable for use in all weather conditions and once water or sand filled for added ballast, the system will provide a premium level of protection for both pedestrians and vehicles.

The GB2™ Barrier has a 2 metre working length making it an ideal low level containment barrier, suitable for highway and site delineation.

The GB2™ has the ability to achieve up to 35° angles thanks to its pin locking device, making uneven ground and corners hassle free.

The system is fully interlocking and can be easily deployed by 2 people without the need for lifting equipment.

Transportation and storage will never be a headache as the GB2™ is fully stackable for convenience and safety.

Features

- **Posable**
The GB2™ has the ability to achieve up to 35° angles thanks to its pin locking device, making uneven ground and corners hassle free.
- **Portable**
The system is fully interlocking and can be easily deployed by 2 people without the need for lifting equipment. Transportation and storage will never be a headache as the GB2™ is fully stackable for convenience and safety.

Suitable For

- **Construction Sites**
- **Crowd Control**
- **Traffic Management**

Technical Specification

Dimensions (mm)	Material	Weight (E/F)	Wind Speed Resistance
L2325 x H900 x D500	UV MDPE	32kg / 350kg	78mph
