

Product Overview

Nationwide In-Ground Steel Hoarding is one of our most popular reusable free stand hoarding systems. This system can be installed quickly, providing good site privacy and security.

Hoarding panels are manufactured using pre-galvanised steel and come in that form as standard. The fencing panels can then be powder coated in various colours which we can match to your corporate colours if required.

Where aesthetics are important, we strongly recommend that a powder coating finish is used.

Features

- **Solid Construction**
Protect buildings, plant, machinery, and people from vehicles.
