

Product Overview

Our versatile and durable Freestanding Plastic Hoardings are widely used for construction sites, events, and temporary settings, serving as a crucial barrier for controlling access, improving safety, and marking boundaries. Unlike traditional fencing materials like wood or metal, these fences are lightweight, simple to install, and resistant to environmental elements.

A key advantage of the Freestanding Plastic Hoarding system is its modular design, often comprising interlocking panels or sections. This design facilitates easy assembly and disassembly, making them highly portable and adaptable to various site layouts. They are also suitable for floor-to-ceiling dust-tight screening during fit-out and refurbishment works in live retail environments.

Features

- **Versatility and Durability**
The system is versatile and durable, making it suitable for various settings such as construction sites, events, and temporary barriers.
- **Ease of Installation and Lightweight**
Unlike traditional fencing materials, the plastic hoarding system is lightweight and easy to install, saving time and effort during setup and take down.
- **Modular Design for Adaptability**
The system's modular design with interlocking panels allows for easy assembly and disassembly, making it highly portable and adaptable to different site layouts and configurations.

Suitable For

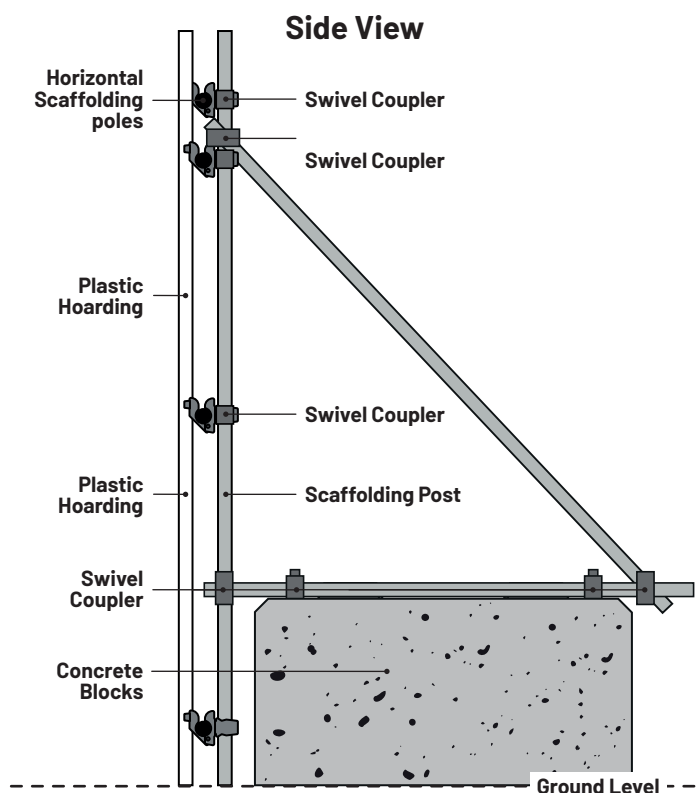

- **Construction Sites**
- **Events and Festivals**
- **Retail, Office and Airports**

Technical Specification

Fence Height	Fence Width	Post Size	Colour
1120 - 5000mm	3500 - 500mm	N/A	Optional
